

Crystal Link Crystal Reports Viewer

Now available to ASSET 4.1.19 users!

Defined Crystal Reports may now be executed from within the ASSET reports module. Crystal Reports templates can now be made available to ASSET users allowing them to run pre-defined Crystal Reports directly from ASSET without having to engage the help of the resident Crystal Expert.

Crystal reports are executed in the same way as other ASSET reports, from within the Reports Module. Once a Crystal Report is selected the Crystal launch window will be displayed.

The screenshot shows the 'Asset Reports' window with a tree view. The 'CRY: Crystal Reports' folder is expanded, showing two reports: '228: Test Crystal Report 1 (Crystal)' and '263: Test Invoice 2 (Invoice) (Crystal)'. Below this, the 'Crystal Report Launcher' dialog box is open, displaying the following information:

Report Name: Test Crystal Report 1
 Crystal Template: \\cfs-aa\oework\Report1.rpt

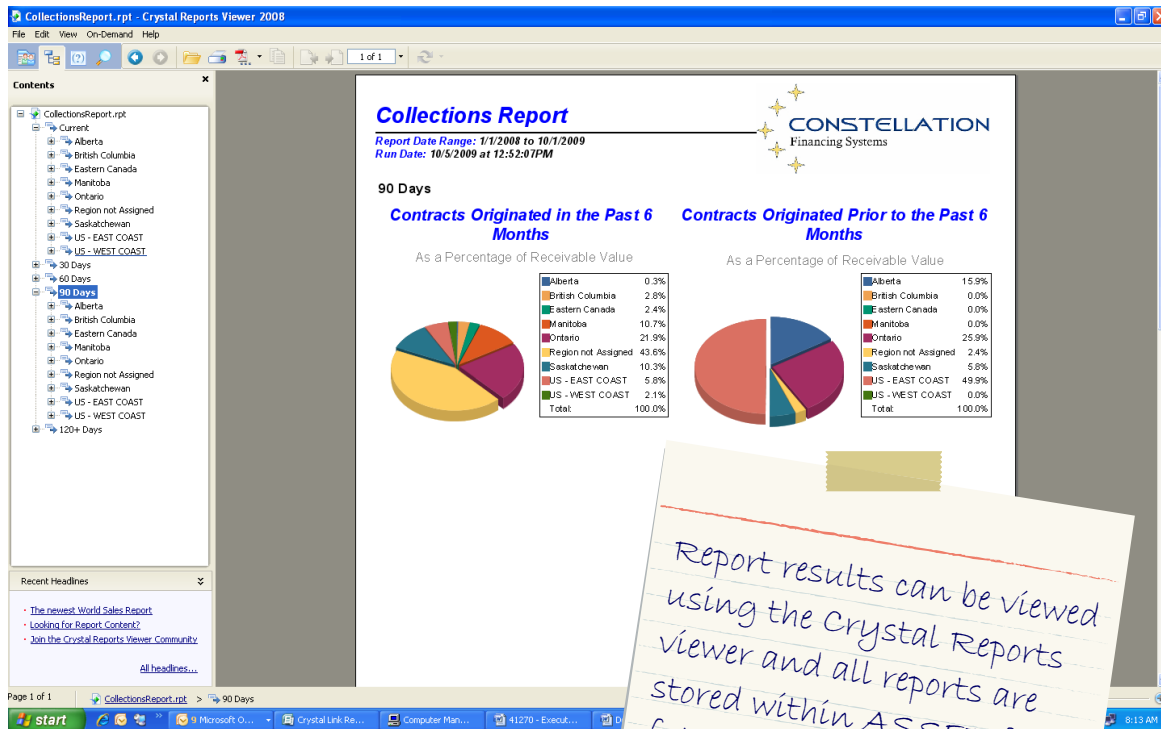

Parameters

Name	Description	Format	Value
Entity	Entity Code	STRING	01
Disposed	Contract Disposed?	BOOLEAN	TRUE

This will launch a specified crystal report through the report manager and refresh the data with the entered params.

Buttons: OK, Cancel

The launch window displays the report name and full path to the report.
 Users can update the values for the report parameters so that the report returns the information they want.

Benefits to Your Business

- Users are empowered to execute their own Crystal Reports even though they may not be the dedicated Crystal user.
- Crystal Reports are stored within ASSET for historical reference.
- Everything is accessible from one place, no need to access external system to generate Crystal Reports.

Requirements for Use

-  ASSET version 4.1.19 or later
-  Crystal Developer must reside on same server as ASSET Reports Manager.
-  Crystal Viewer must reside on users workstations. This is available as a free download.
